1. System Overview (Escrow)

Swapy.tech operates under a trust/escrow model. When a buyer makes a payment, the funds **do not** go directly to the seller. The money is securely held in Swapy's smart contract / database until the transaction is successfully completed or a dispute is resolved.

> **Note on Chat:** The order chat is enabled immediately after the status changes to `PAID`. All order processing, communication, and evidence submission (images/videos) are handled through this universal channel, which is immutable.

2. Order Lifecycle (State Machine)

The order lifecycle is a strict state machine. The user interface (Frontend) hides or displays buttons depending on the current state (`Status`) to protect the transaction's integrity.

State (Status)	Description	Trigger	Visible Buttons (Buyer)	Visible Buttons (Seller)
`PAID`	Order paid. Funds in Escrow.	Buyer completes the payment.	`Cancel Order`	`Mark as Delivered`, `Cancel Order`
`CANCEL_REQ`	Cancellation request prior to delivery.	Buyer clicks `Cancel Order`.	`Escalate to Support`	`Accept Cancel`, `Reject Cancel`
`DELIVERED`	Item delivered (Manual or Auto-Delivery).	Seller clicks `Mark as Delivered`.	`Confirm Delivery`, `Open Dispute`	`Cancel Order`
`DISPUTED`	Official dispute opened. Negotiation ongoing.	Buyer clicks `Open Dispute`.	`Escalate to Support`, `Cancel Dispute`	`Cancel Order`, `Mark as Delivered` *, `Escalate to Support`
`ESCALATED`	Intervention required from Swapy Staff.	Buyer or Seller clicks `Escalate to Support`.	*(Locked)*	`Cancel Order`
`COMPLETED`	Order successfully finished without Admin intervention.	Buyer clicks `Confirm Delivery` or **72 hours pass** since delivery.	`Leave Review`	*(None)*

`RESOLVED`	Order finished by an Admin ruling.	Admin issues a resolution in the panel.	`Leave Review`	*(None)*

⏳ **Critical Auto-Completion Rule (72 Hours):** If the seller marks the order as `DELIVERED`, a 72-hour timer begins. If the buyer does not click `Confirm Delivery` or open a dispute (`Open Dispute`) within that timeframe, the system will automatically transition the order to the `COMPLETED` state and release the funds to the seller.

- **Note on Re-delivery:** In the `DISPUTED` state, the seller retains the `Mark as Delivered` button to allow them to fix the issue (e.g., sending a new key through the chat) and force the buyer to review the new delivery.

3. Standard Operating Procedures (SOP) for Support Agents

When an order reaches the `ESCALATED` state, the support team takes control through the **Admin Hub**.

3.0. Escalation Auto-Reply (Welcome Message)

To optimize resolution times (Time-to-Resolution), the system allows configuring automated responses that are instantly sent to the chat when the order transitions to `ESCALATED`.

- **Configuration Example:** *"Hello, I am [Agent/System Name], a support agent from Swapy.tech. I will review your case shortly and issue a ruling. To speed up the process, please ensure you have submitted your evidence in a continuous, uncut VIDEO. You have 24 hours to do so."*

3.1. Case A: Dispute Approved (Ruling in favor of the Buyer) 🚩

- **Conditions:** No delivery made, SLA severely exceeded without notice, or invalid item proven by a continuous video from the buyer.
- **Action:** Click on 🚩 `Buyer Wins` (100% Refund).
- **DB Impact:** Immediate refund to the Buyer's Wallet. An optional *Strike* can be applied to the seller's reputation.

3.2. Case B: Dispute Rejected (Ruling in favor of the Seller) ✔️

- **Conditions:** Buyer fails to provide video evidence, suspected fraud/VPN usage, or seller proves the item's validity with official logs.
- **Action:** Click on ✔️ `Seller Wins` (Release Funds).
- **DB Impact:** The balance remains on a **Security Hold for 3 additional days** in Escrow to prevent chargebacks. Afterward, it is released to the Seller's Wallet. Optional *Strike* to the buyer.

3.3. Case C: Partial Split (Partial Refund) ⚖️

- **Conditions:** Minor promised features are missing, or there is a mutual split agreement (e.g., 50/50) in the chat.
- **Action:** Adjust the percentage *Slider* and click ⚖️ `Apply Division`.
- **DB Impact:** The Escrow contract is mathematically divided and distributed to both Wallets. No impact on reputation for either party.

3.4. Case D: Neutral Cancellation (Mutual Agreement) 🤝

- **Conditions:** Honest stock error admitted by the seller or technical failure of Swapy's Auto-Delivery system.
- **Panel Action:** Processed as a neutral refund.
- **DB Impact:** 100% refund to the buyer. **No impact** on the scores of either party.

4. Mod Tools Usage Guide (Sanctions and Moderation)

Located in the Admin Hub, these tools alter user permissions at the database level. Providing a `Reason` and `Duration` is **strictly required** for internal auditing purposes.

Tool	Main Objective	Platform Effect
Force KYC	Suspicious buyers with high-risk IPs or high dispute rates.	Blocks buying/selling capabilities until the user uploads and approves an official ID document (Passport/National ID).
Freeze Wallet	Risk of Exit Scam or sudden spikes in mass disputes.	Blocks **withdrawals** of funds to bank/crypto. Allows the user to continue operating in chat.
Suspend	Chat toxicity or minor TOS violations.	Temporary login block (24h, 7d, 30d).
Ban HWID	Scammers, money laundering, malicious chargebacks.	**Immutable Permaban** (Hardware ID, IP, Email). Funds are seized according to TOS.

5. Admin Hub Architecture

The resolution panel (*Deep View*) is symmetrically designed in 3 columns to prevent bias and centralize all information without requiring additional tabs.

Column 1: Symmetrical Profiles (Users)

Displays an exact mirror of both parties' histories (Buyer and Seller) to detect cross-behavior anomalies (e.g., Bot farms).

- **User Meta:** Registration date, original country, and live IP check (`Match ✓` if the current IP matches the registration country).
- **Purchase History:** Total, completed, and canceled purchases.
- **Sales History:** Total, completed, and canceled sales.

- **Trust & Scores:** * `Trust Score` (Buyers): Measures reliability vs. dispute opening rates.
    - `Reputation` (Sellers): Average star rating from their completed sales.

Column 2: Order Context & Universal Chat

The main workspace where evidence is analyzed.

- **Item Details:** Title, category, and credentials if it was *Auto-Delivery*.
- **Delivery SLA (Timer):** Compact tag that evaluates the actual delivery time against the promised time (e.g., ⏱️ `Delay: -14:55`).
- **Immutable Chat:** Complete history. Evidence images and videos are **embedded** directly into the users' chat bubbles for easy sequential viewing.
- **Admin Input:** Text field for the agent to intervene using the distinct 🛡️ `Admin` badge.

Column 3: Control & Resolution Tools

The operational and financial decision-making module.

- **Internal Notes (Staff):** Warning-colored text area (yellow) invisible to users, used to document findings between support shifts.
- **Administrative Actions (Mod Tools):** Target user selector, duration input, reason input, and quick execution buttons (Force KYC, Freeze, Suspend, Ban HWID).
